

## Document 1: System Hierarchy & Architecture

### SHACK ENTERTAINMENT

#### System Hierarchy & Architecture

Version 1.0 | Confidential

##### 1. Executive Overview

Shack Entertainment operates as a decentralized, AI-augmented creative collective. The system is designed to maximize creative output while maintaining strict quality control, financial transparency, and brand integrity.

##### 2. The Chain of Command

All operations flow through a central command structure. No external action is taken without the Managing Director's (Bola) approval.

Managing Director (Bola): Final decision maker. Approves all external actions, financial commitments, and published content.

Chief of Staff (Agent 0fjr9eavdp2o): Central command, task router, and primary interface. Enforces the Shack Assets Protocol.

Specialist Agents:

Creative Director: Handles Artists Unlimited & Live Exchange content.

Shack News Editor: Manages the Mon/Wed/Fri editorial calendar.

Shack Finance: Tracks revenue, expenses, and enforces the 70/30 artist split.

Site Ops: Manages website security and dashboard metrics.

Communications Hub: Drafts emails and manages calendar (No sending without approval).

##### 3. The Shack Assets Protocol

The Shack\_Assets directory is the single source of truth.

Rule 1: Agents can READ manifests and talent cards freely.

Rule 2: Agents CANNOT share contacts, send contracts, publish bios, or approve partnerships without Bola's sign-off.

Rule 3: Agents MUST NOT move, delete, or rename files without instruction.
